

protect & verify

BRANDPROOF®

detect counterfeit products in seconds

PROTECT YOUR PRODUCT.

Would you finally want to proof counterfeits of your product at any occasion and in seconds?

BRANDPROOF® uses unique fluorescent marker particles as compatible additive to identify your product by a fast, precise and mobile measurement.

Unique properties of the technology are:

- + Robust since the marker particles are embedded in the plastic and stable against heat (~800°C), UV, water and most chemicals
- + Reliable since specific marker properties do not change and are measurable without destruction at any spot of the marked plastic
- + Cost-efficient since the combination of marker and detector costs are low
