

Identify & Tracking

TrackByStars®

forgery-proof random particle fingerprint

BE SURE ABOUT YOUR PRODUCT.

Would you like to finally track each of your products, especially those made of plastic, from production to end of life and implement a Digital Product Passport?

TrackByStars® uses our marker particles as compatible additive in plastics to create a random fluorescent starry sky which is registered as unique identifier of the specific product unit.

Outstanding properties of the technology:

- + A universal solution for all plastic products without exemption
- + Completely circular / recyclable, a new starry sky just needs to be registered new
- + Robust since the particles are robust and embedded in the plastic
- + Reliable since the starry sky is resilient against surface wear and partial surface coverage
